Dough Trough Post Hoists

Topos offers both screw type (STDTH) and chain type (CTDTH) heavy duty dough trough hoists to elevate and dump large dough. These hoists can be made as straight legged or angled leg units. These units can be self supporting or ceiling supported. We can fabricate them in heavy duty mild steel coated in 'Steel-It' S/S coating or in full S/S. We also provide them with S/S dough chutes or dough hoppers for use in front of a mixer - for sponge dough re-mixing - or to feed a dough divider or dough feeder. We make these hoists in all heights and widths to suit your needs and layout. All controls and motors are built for a wash down environment. Optional mineral oil spray bars for use inside the dough chutes/hoppers, to minimize dough adhesion, are also available.

*Dough mixing capacities based on 62% dough absorption.

Standard Features

The lifting saddle is designed to fit your exact trough.

Accurate cam position switch for precise start and stop points.

High efficiency brake motor drive with multi V-belt design.

S/S dough chutes and hoppers are built-to-order.

Optional oil-spray-bars can be mounted on the dough chute or hopper.

Heavy duty threaded screw or HD roller chains can be optioned to lift trough saddle.

Self-supporting rear leg sets eliminate the need to stabilize the hoist to your ceiling.

NEMA 4 controls as well as OSHA safe visual and audible notifications of machine operation.

Sanitary design for simplified sanitation.

Custom trough hoists can be integrated into your make-up process machinery
