Dry Material Dispenser

Topos dispensers are built to last, using a robust design that is meticulously engineered for ease of use, sanitation, and safety. The material hopper is removable, so changing products can be quickly and easily accomplished. The hopper can be sanitized thoroughly, while 'off' of the line. These units can be equipped to suit your exact electrical needs and equipped with a standalone, NEMA 4X washdown AC drive, or a custom-built push button control panel. The variable speed drive controls the speed of the rotary agitator in the hopper, which varies the material dispensing rate. The adjustable slide tabs under the perforated hopper. This is best suited for dry, free-flowing toppings and ingredients.

Screen varies the dispensing width and the dispensing rate. Topos offers a 24", 36", and 48" wide unit to accommodate your product width. We also offer an upgraded 100% stainless steel gear motor drive version for full wash down and longevity.

Standard Features

For harsh washdown environments, optional S/S motor-gear box steel and S/S bearing housings are available.

The lift-off hopper lid protects product in the hopper from contamination and stops access to agitators during production.

Dispenser comes in three sizes to fit your line - 24", 36" and 48" width.

Option of a stand alone variable speed controller or a custom built control package, in the required voltage.

Flow adjustment tabs allow adjustment of flow and can be used to make patterns, or variate dispensing width.

In addition to mounting over your line, Topos dispensers can also be mounted on a portable S/S cantilever frame that can be easily moved from line to line as required.

Ideally suited for dispensing all types of flours, cinnamon sugar, starch, cornmeal, granular sugar, sprinkles, and similar free flowing dry materials.

The material hopper releases from frame to allow rapid changeover without the use of tools.
